

Email Archiving and Retrieval

Unmanaged email usage, un-enforced policies, as well as the inability to easily and effectively retrieve email records on demand, are the major email related problems that get organisations into trouble and can cost a significant amount.

These are the top business issues in this area:

- Email Storage
- Legal Discovery and Investigations
- Regulatory Compliance
- Email Security and Policies
- Productivity, Monitoring and Policy Enforcement

Search & Retrieval

An optional Individual Search and Retrieval interface gives users the ability to search only emails that they sent or received. For users, it's like having the ultimate Inbox and Sent folders with fast, intelligent searching for important emails, phone numbers, etc. and includes attachments in the search.

Overview

Our Email Archiving and Retrieval solutions are based on a high-performance archiving architecture, a robust and flexible reporting platform, and an easy-to-use interface.

Our solution securely stores all incoming, outgoing, and internal emails, header information, subject lines, domains sent to/from, file size, folder names, attachments and even body text, in an archive for easy and fast search and retrieval.

Email Archive

Our Email Archive is a comprehensive core solution for multiple business problems that require email archiving, such as regulatory compliance, email investigations and research, and email storage issues. In addition, we offer advanced interfaces for specialized applications.

Outlook Integration

From within Microsoft Outlook, users can easily search the Email Archive, then Reply/Forward or drag and drop copies of emails into local email folders. This facility is faster than native Outlook search and includes searching attachments.

Forensic Investigation

We provide an advanced investigative interface made specifically for the legal professionals where frequent in-depth searching and analysis for evidentiary discovery on past email activity is required. The module provides full text search of the email message and attachments.

Compliance Manager

This advanced interface was made specifically for compliance officers, auditors or others who need to ensure a company has the capabilities to meet compliance regulations requests, self audits, records retention or investigative needs.

Storage Management

This module is used in conjunction with your mail server to overcome problems associated with large mail stores such as PSTs, quotas, and long back up times. e-Solutions Storage Management will dramatically reduce the size of your mail store .

Management Reporting

This module provides management with never-before-seen intelligence into corporate email activity, usage patterns and trends. Managers can view high-level reports with drill-down capability to become better aware of how email is used by their staff, where it poses a risk to the organization, and take remedial action.

E-Solutions Archive Genie

The Genies are a range of devices which have been developed by e-Solutions to make many of the functions surrounding the delivery of improved email and other communication services easier.

The Archive Genie links with your Exchange or Notes server to provide you with a fast and efficient email archive, and keeps the system administration overhead down to a minimum.

Further information Please contact us for more detailed information on our range of email management solutions and how they can be tailored to meet your specific business requirements.
